# Android convert r. string to charsequence

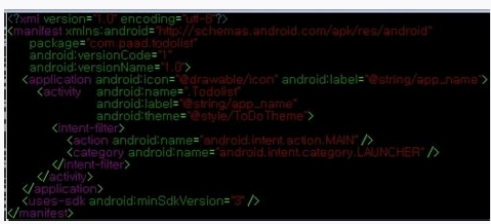

EXAMPLE:

XML file saved at res/values/strings.xml:

```
<?xml version="1.0" encoding="utf-8"?>
<resources>
  <string-array name="planets_array">
    <item>Mercury</item>
    <item>Venus</item>
    <item>Earth</item>
    <item>Mars</item>
  </string-array>
</resources>
```

This application code retrieves a string array:

```
Resources res = getResources();
String[] planets = res.getStringArray(R.array.planets_array);
```

```
